

GRACO Fertilizer Company

16-4-8 2% Iron and Minors Turf Fertilizer

DIRECTIONS: Always water after applying fertilizer.

TREES: Trees in the lawn may be fertilized by surface application at two (2) times the lawn rates given below for the entire area under the spread of the branches to slightly beyond the drip line. Use one (1) lb of turf fertilizer per inch of trunk diameter at chest height.

TURF: Apply 5 lbs per 1,000 sq ft, two (2) times per year to maintain good color and vigor of Centipede and St. Augustine grasses. For cool season grasses such as Fescues and Bluegrass, 8 lbs per 1,000 sq ft applied in the early spring and 10 lbs per 1,000 sq ft applied in early fall. Graco recommends at least two (2) applications per year for Bermuda grass turf. Apply 10 lbs per 1,000 sq ft in early spring and again in early fall.

SPREADER GUIDE:

These settings can be used only as a guide; they are not absolute. The speed at which the applicator walks, spreader condition, and the texture of the turf will alter the rate of application. If product remains in spreader after application to recommended square foot coverage, spread remainder over same area going at right angles.
